

AIRCRAFT MAINTENANCE MANUAL

SPRING TAB - REMOVAL/INSTALLATION

EFFECTIVITY: ALL

1. General

- A. This section gives the procedures to remove and install the spring tabs.
- B. These procedures are applicable to the LH and RH spring tabs.
- C. The procedures in this section are given in the sequence below. The tasks identified with (♦) are part of the Scheduled Maintenance Requirements Document (SMRD).

TASK NUMBER	DESCRIPTION	EFFECTIVITY
27-31-08-000-801-A	SPRING TAB - REMOVAL	ALL
27-31-08-400-801-A	SPRING TAB - INSTALLATION	ALL

EMB145 - EMB135

I. Removal ([Figure 401](#))

SUBTASK 020-002-A

WARNING: MAKE SURE THAT THE RUDDER CANNOT BE OPERATED ACCIDENTALLY. AN ACCIDENTAL OPERATION OF THE RUDDER CAN CAUSE INJURY TO PERSONS.

- (1) Remove the fairings (28) ([AMM TASK 55-14-00-000-801-A/400](#)). Refer to DET. F.
- (2) Remove the fairings (29) ([AMM TASK 55-14-00-000-801-A/400](#)). Refer to DET. G.
- (3) Remove the cotter pin (18) and discard it. Refer to DET. C.

- (4) Remove the nut (19), two washers (6), two bushings (5), and bolt (7) to disconnect the ends of the rods (17) from the hinge (4) at the spring tab (1). Refer to DET. C.
- (5) Remove the cotter pin (23) and discard it. Refer to DET. D.
- (6) Remove the nut (24), two washers (25), two bushings (22), and bolt (27) to disconnect the hinges (26) of the spring tab (1) from the supports (21) at the elevator structure. Refer to DET. D.
- (7) Remove the cotter pin (34) and discard it. Refer to DET. H.
- (8) Remove the nut (35), two washers (36), two bushings (37), and bolt (39) to disconnect the hinges (38) of the spring tab (1) from the supports (30) at the elevator structure. Refer to DET. H.

WARNING: USE EYE PROTECTION WHEN YOU REMOVE OR INSTALL LOCKWIRE OR SAFETY CABLE. IF YOU DO NOT USE EYE PROTECTION, CUT PIECES OF WIRE CAN HIT YOUR EYES AND CAUSE INJURY.

CAUTION: DO NOT LET PIECES OF DISCARDED LOCK WIRE STAY IN THE AIRCRAFT OR IN THE WORK AREA. IF NECESSARY, USE A VACUUM CLEANER TO REMOVE THEM.

- (9) Remove and discard the lockwire (33). Refer to DET. H.
- (10) Remove one of bolts (32) and washer (31) from the support (30) at the elevator structure to disconnect the end of the bonding strap (3). Refer to DET. H.
- (11) Remove the cotter pin (16) and discard it. Refer to DET. C.
- (12) Remove the nut (15), two washers (9), bushing (10), and bolt (8) to disconnect the hinge (4) of the spring tab (1) from the support (11) at the elevator structure. Refer to DET. C.

WARNING: USE EYE PROTECTION WHEN YOU REMOVE OR INSTALL LOCKWIRE OR SAFETY CABLE. IF YOU DO NOT USE EYE PROTECTION, CUT PIECES OF WIRE CAN HIT YOUR EYES AND CAUSE INJURY.

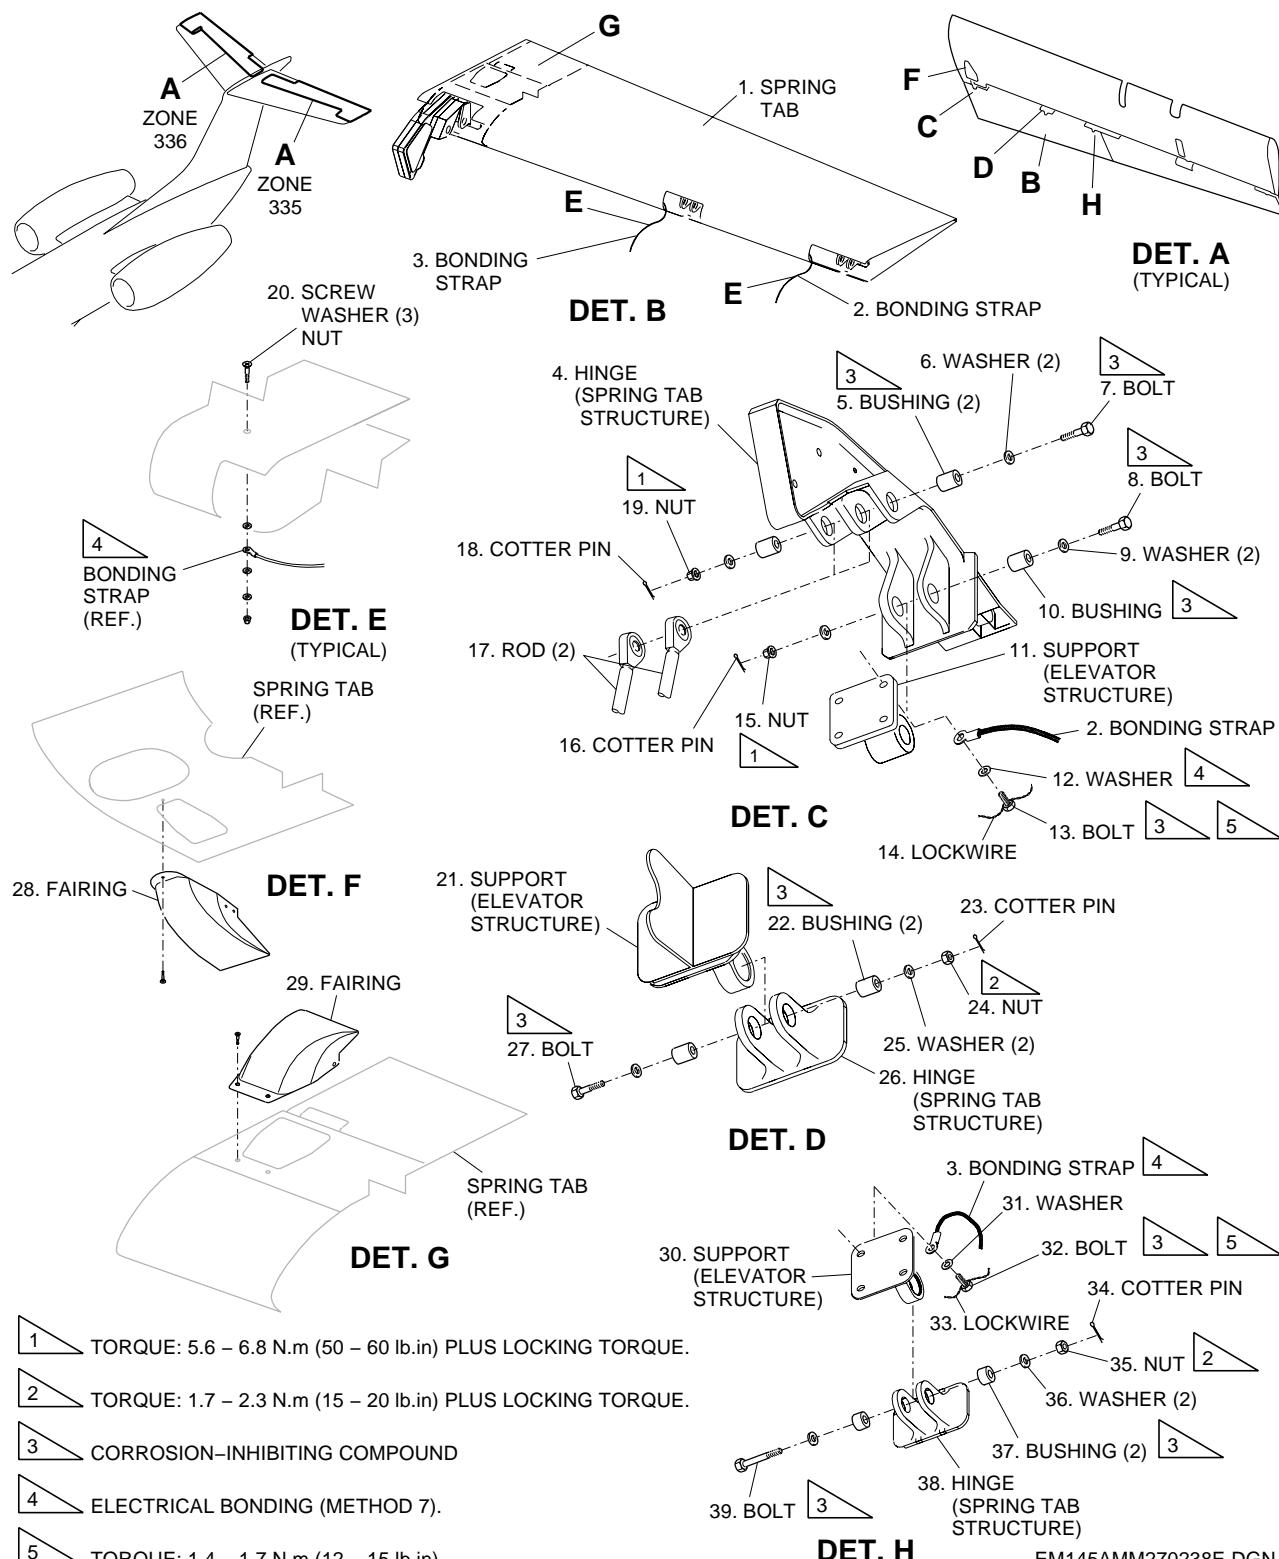

CAUTION: DO NOT LET PIECES OF DISCARDED LOCK WIRE STAY IN THE AIRCRAFT OR IN THE WORK AREA. IF NECESSARY, USE A VACUUM CLEANER TO REMOVE THEM.

- (13) Remove and discard the lockwire (14). Refer to DET. C.
- (14) Remove one of bolts (13) and washer (12) from the support (11) at the elevator structure to disconnect the end of the bonding strap (2). Refer to DET. C.
- (15) Remove the spring tab (1).
- (16) If necessary, remove the screw (20), three washers, and nut to disconnect the ends of the bonding straps (2) and (3) from the spring tab (1). Refer to DET. E.

EFFECTIVITY: ALL

I. Preparation

SUBTASK 841-002-A

- (1) If you replaced the spring tab by a different one, do the Spring Tab Static Balancing (AMM TASK 51-60-01-700-801-A/500).

NOTE: If the same Spring Stab is installed and has not been repaired and or repainted, Static Balance is not required.

- (2) Do the bonding procedures, method 7 ([AMM TASK 20-13-21-910-801-A/200](#)), to install the bonding jumpers (2) and (3) Figure 401.

WARNING: CA-1000 OR COR-BAN 27L CORROSION-INHIBITING COMPOUND IS TOXIC TO SKIN, EYES, AND RESPIRATORY TRACT. USE GOGGLES AND PROTECTIVE GLOVES. USE ONLY IN WELL VENTILATED AREAS. OBEY THE MANUFACTURER'S HEALTH AND SAFETY INSTRUCTIONS.

- (3) Apply CA-1000 or COR-BAN 27L as shown in (Figure 401).

J. Installation Figure 401

SUBTASK 420-002-A

- (1) Put the spring tab (1) on the elevator structure.
- (2) Install the bolt (27), two washers (25), two bushings (22), and nut (24) to connect the hinges (26) of the spring tab (1) to the supports (21) at the elevator structure. Refer to DET. D.
- (3) Install bolt (32), washer (31) and the end of the bonding strap (3) to the support (30) at the elevator structure. Refer to DET. H.

WARNING: USE EYE PROTECTION WHEN YOU REMOVE OR INSTALL LOCKWIRE OR SAFETY CABLE. IF YOU DO NOT USE EYE PROTECTION, CUT PIECES OF WIRE CAN HIT YOUR EYES AND CAUSE INJURY.

- (4) Torque the bolt (32) and safety it with the other bolts of the support (30) at the elevator structure with lockwire (33). Refer to DET. H.
- (5) Install the bolt (39), two washers (36), two bushings (37), and nut (35) to connect the hinges (38) of the spring tab (1) to the supports (30) at the elevator structure. Refer to DET. H.
- (6) Install bolt (13), washer (12) and the end of the bonding strap (2) to the support (11) at the elevator structure. Refer to DET. C.

WARNING: USE EYE PROTECTION WHEN YOU REMOVE OR INSTALL LOCKWIRE OR SAFETY CABLE. IF YOU DO NOT USE EYE PROTECTION, CUT PIECES OF WIRE CAN HIT YOUR EYES AND CAUSE INJURY.

- (7) Torque the bolt (13) and safety it with the other bolts of the support (11) at the elevator structure with lockwire (14). Refer to DET. C.
- (8) Install the bolt (8), two washers (9), bushing (10), and nut (15) to connect the hinge (4) of the spring tab (1) to the support (11) at the elevator structure. Refer to DET. C.
- (9) Put the ends of the two rods (17) in the hinge (4) at the spring tab (1) and attach them with the bolt (7), two washers (6), two bushings (5), and nut (19). Refer to DET. C.
- (10) Make sure that the threads of the nut (24) and bolt (27) fully engage. The base of the nut (24) must not touch the surface.
- (11) Turn the nut (24) and measure the locking torque with a torque wrench.
- (12) Make sure that the locking torque value is 0.23 - 2.04 N.m (2 - 18 lb.in).

NOTE: If you find a nut that is not in the correct range, you must replace it.

- (13) Add the locking torque value measured to the standard torque of 1.7 - 2.3 N.m (15 - 20 lb.in) to get the final torque.
- (14) Apply the final torque to the nut (24) with a torque wrench, as follows:

- (a) Tighten the nut (24) to the bolt (27) to remove clearance.
- (b) Torque the nut (24) with the minimum final torque value. Continue to torque as necessary to align the slot in the nut (24) with the cotter pin (23) hole in the bolt (27).

NOTE: Be careful not to apply more than the maximum final torque value.

- (c) Safety the nut (24) to the bolt (27) with a new cotter pin (23).
- (15) Make sure that the threads of the nut (35) and bolt (39) fully engage. The base of the nut (35) must not touch the surface.
- (16) Turn the nut (35) and measure the locking torque with a torque wrench.
- (17) Make sure that the locking torque value is 0.23 - 2.04 N.m (2 - 18 lb.in).

NOTE: If you find a nut that is not in the correct range, you must replace it.

- (18) Add the locking torque value measured to the standard torque of 1.7 - 2.3 N.m (15 - 20 lb.in) to get the final torque.
- (19) Apply the final torque to the nut (35) with a torque wrench, as follows:
 - (a) Tighten the nut (35) to the bolt (39) to remove clearance.
 - (b) Torque the nut (35) with the minimum final torque value. Continue to torque as necessary to align the slot in the nut (35) with the cotter pin (34) hole in the bolt (39).

NOTE: Be careful not to apply more than the maximum final torque value.
 - (c) Safety the nut (35) to the bolt (39) with a new cotter pin (34).
- (20) Make sure that the threads of the nut (15) and bolt (8) fully engage. The base of the nut (15) must not touch the surface.
- (21) Turn the nut (15) and measure the locking torque with a torque wrench.
- (22) Make sure that the locking torque value is 0.39 - 3.39 N.m (3.5 - 30 lb.in).

NOTE: If you find a nut that is not in the correct range, you must replace it.
- (23) Add the locking torque value measured to the standard torque of 5.6 - 6.8 N.m (50 - 60 lb.in) to get the final torque.
- (24) Apply the final torque to the nut (15) with a torque wrench, as follows:
 - (a) Tighten the nut (15) to the bolt (8) to remove clearance.
 - (b) Torque the nut (15) with the minimum final torque value. Continue to torque as necessary to align the slot in the nut (15) with the cotter pin (16) hole in the bolt (8).

NOTE: Be careful not to apply more than the maximum final torque value.
 - (c) Safety the nut (15) to the bolt (8) with a new cotter pin (16).
- (25) Make sure that the threads of the nut (19) and bolt (7) fully engage. The base of the nut (19) must not touch the surface.
- (26) Turn the nut (19) and measure the locking torque with a torque wrench.
- (27) Make sure that the locking torque value is 0.39 - 3.39 N.m (3.5 - 30 lb.in).

NOTE: If you find a nut that is not in the correct range, you must replace it.
- (28) Add the locking torque value measured to the standard torque of 5.6 - 6.8 N.m (50 - 60 lb.in) to get the final torque.
- (29) Apply the final torque to the nut (19) with a torque wrench, as follows:
 - (a) Tighten the nut (19) to the bolt (7) to remove clearance.

- (b) Torque the nut (19) with the minimum final torque value. Continue to torque as necessary to align the slot in the nut (19) with the cotter pin (18) hole in the bolt (7).
NOTE: Be careful not to apply more than the maximum final torque value.
 - (c) Safety the nut (19) to the bolt (7) with a new cotter pin (18).
- (30) If necessary, connect the bonding straps (2) and (3) to the support at the spring tab (1) with the screw, three washers, and nut (12). Refer to DET. E.
NOTE: Refer to ([AMM TASK 20-13-21-910-801-A/200](#)) for the correct installation of the bonding straps (2) and (3).
- (31) Do the bonding test ([AMM TASK 20-13-21-700-801-A/200](#)).
 - (32) Do the bonding protection ([AMM TASK 20-13-21-910-802-A/200](#)).
 - (33) Install the fairing (28) ([AMM TASK 55-14-00-400-801-A/400](#)). Refer to DET. F.
 - (34) Install the fairing (29) ([AMM TASK 55-14-00-400-801-A/400](#)). Refer to DET. G.

K. Follow-on

SUBTASK 842-002-A

- (1) If you replaced the spring tab by a different one do the Elevator Balancing Check ([AMM TASK 51-60-00-700-801-A/500](#)).
NOTE: It is not necessary to do the Elevator Balancing Check when you install the same spring tab in the same elevator assembly.
- (2) Measure the backlash of the spring tab ([AMM TASK 27-31-00-700-801-A/500](#)).
NOTE: • Do not measure the servo tab and elevator backlashes.
• Do this step only if you replaced the spring tab with a new one or if you replaced it with a spring tab used on other aircraft.
- (3) Do the operational check on the servo tabs ([AMM TASK 27-31-04-700-801-A/500](#)).
- (4) Do the check of the adjustment of the backstop of the spring tabs ([AMM TASK 27-31-08-700-801-A/500](#)).
NOTE: Do this step only if you replaced the spring tab with a new one or if you replaced it with a spring tab used on other aircraft.
